Re: Proposal for Engineering Services
Muirfield Drive Drainage Improvements Engineering Assessment
Town of Manlius
MJ Proposal No. 2022494

Dear Ms. Bollinger:

M. J. Engineering and Land Surveying, P. C. (MJ) is pleased to provide the Town of Manlius (Town) this proposal for engineering services associated with planned rehabilitation and expansion of the Muirfield retention system along Muirfield Drive within the Town.

PROJECT UNDERSTANDING

Based upon information provided to MJ by the Town, MJ has the following project understanding:

- Miller Engineering completed a study of the existing stormwater systems within the area of Hoag Lane, Churchill Lane and Muirfield Drive in 2020. The purpose of the study was to assess reported operational issues within the area, primarily flooding during excessive storm events. The Miller study identified limited infrastructure within the study area with stormwater flows being conveyed by makeshift open swales or traveling down the roadways. The most prominent feature is the Muirfield retention system. This system is a graded basin with a concrete vault with an open bottom placed atop of rock. Runoff can pass into and through the vault and into the underlying rock which is karst geology and promotes infiltration.
- The Miller study recommended the following improvements:
    - Increase the storage capacity of the Muirfield retention system, adding a perimeter fence and a landscape buffer along the south property line.
    - Install large diameter storm pipes (24-inch and 30-inch) along Hoag Lane and Muirfield Drive, to meet a 2-year design storm with all new pipes being perforated and bedding in a uniformly graded gravel.
    - Replace any existing storm sewer pipe along Muirfield Drive and Hoag Lane that are less than 12-inch diameter to a larger diameter pipe.
    - Install an underground drainage array at the unimproved right-of-way located along Muirfield Drive between 5124 and 5128 Muirfield Drive. This system will infiltrate runoff.
- Since the completion of the study, the Town was planning to initiate a clean out of the concrete vault within the Muirfield retention system. The Town requested MJ to visually assess the concrete vault to determine whether it would be feasible to perform the planned cleaning. Based upon limited visual observations conducted in July of 2022, MJ is of the opinion that removal of the concrete covers could result in the covers breaking as they are in a progressed state of deterioration and there are no means safely to lift them off the vault. Further, there appears evidence of advanced failure of the vertical concrete masonry unit walls of the tank due to observed settlement of the covers at the southern end of the vault. Based upon these limited observations, MJ does not believe maintenance could be performed on the vault without causing damage.
- Due to budget limitation, the initial phase of work is for a limited study to (1) replace or enlarge the existing concrete vault and (2) reconfigure the inlet to the open basin such that is discharges to the ground

surface and into a forebay. An alternate assessment of enlarging the graded basin and providing a dedicated outlet will also be considered.

- The Town has requested that MJ provide the noted engineering assessment for the above alternatives.

Based upon the above understanding, MJ offers the following scope of services for the Town's consideration.

SCOPE OF SERVICES

Task 01: Drainage Study

MJ will complete an assessment of the study area, utilizing portions of the Miller study previously completed. The study will examine various storm events based upon existing and proposed conditions to assess whether the improvements being proposed will provide a net benefit to the surrounding areas. MJ staff will complete a field review of the site to gain a full understanding of the existing conditions and setting. A conceptual plan of improvements will be presented illustrating areas of work. An Opinion of Probable Project Costs will be presented. Optional items will be itemized accordingly.

A study report will be provided which will discuss the assessment completed. The noted concept plan and estimate will be provided as appendices of the report. MJ will provide the Town with a draft of the report for review and comment. Upon receipt of all comments from the Town, MJ will address the comments, revise the report as may be necessary and issue a final report.

MJ, will participate in project meetings. At this time, MJ expects two meetings (1) to present and discuss the scope of the study with the Town board and (2) present the findings of the study to the Town Board and/or affected residence. For the public presentation, MJ will prepare a power point presentation of the report findings and be prepared to answer questions.

ASSUMPTIONS AND TASKS NOT INCLUDED IN THIS PROPOSAL

The following assumptions apply to this scope of work:

1. The assessment of alternatives beyond what has been stated are not included.
2. Structural assessment of the existing concrete vault is excluded.
3. Completion of field studies such as land surveying or wetland assessments are excluded.
4. Preparation of design plans is excluded.
5. Additional meetings beyond the two (2) noted above.

SCHEDULE

MJ can provide a draft report within six (6) weeks of authorization to proceed. A final report will be issued within two weeks of receipt of all comments.

FEE

MJ proposes to complete the requested services for the lump sum fee of $8,000. MJ will invoice on a monthly basis based upon a percentage of work completed in that period. The fee assumes there are no significant changes resulting from decisions, conditions and/or events beyond MJ's control.

SUMMARY

Thank you for the opportunity to submit this proposal and we look forward to continuing our work with the Town on this project. If you have any questions, please feel free to contact Joel Bianchi at (518) 371-0799 or by email at jbianchi@mjels.com.

Sincerely,

Michael D. Panichelli, P.E.
